1.0 INTRODUCTION

1.1 Purpose

This Software Design Document (SWDD) describes the architecture, subsystem breakdown, data design, component structure, and human interface design of the Career Bound system. The document provides the design foundation necessary for implementation and integration of the Career Bound software platform.

The intended audience of this document includes:

- Developers
- Designers
- QA reviewers
- Project managers
- Instructors
- Stakeholders

This document serves as the primary design reference for the Career Bound project and establishes standardized architecture, interface, workflow, and UI design patterns used throughout the system.

1.2 Scope

Career Bound is a web and mobile application for career networking and job searching designed to connect students and employers through profiles, resumes, job postings, notifications, and search capabilities.

The system supports:

- Student profile management
- Company profile management
- Resume creation and submission
- Job posting management
- Candidate and job search
- Notifications and news feed updates
- Responsive desktop and mobile interfaces

The goals of the project are to:

- Simplify finding jobs and candidates
- Improve communication between students and employers
- Provide a centralized career development platform
- Support scalable and modular software architecture

- Demonstrate standardized software engineering practices

The project delivers the following key benefits:

- Improved organization of career-related information
 - All student profiles, resumes, job postings, company information, news, and notifications are centralized in one easy-to-access platform instead of being scattered across emails, spreadsheets, and multiple websites.
- Streamlined resume and application workflows
 - Students can create, update, and submit resumes quickly and efficiently, while companies can easily review candidates and manage job postings, which reduces the manual work and speeds up the entire hiring process.
- Improved accessibility on desktop and mobile devices
 - Students and companies can access all features (profiles, search, notifications, resumes, etc.) conveniently from any device. The platform provides consistent, high-quality experiences whether on a desktop computer, laptop, tablet, or mobile phone.
- Modular architecture supporting maintainability and scalability
 - The system is built using well-defined and independent components (as shown in the component diagram). This modularity makes the application easier to maintain, update, and expand in the future without disrupting the entire system.

1.3 Overview

This document is organized into the following major sections:

- Introduction and project overview
- System architecture and subsystem decomposition
- Data design and storage structure
- Component design
- Human interface design and screen views
- Requirements traceability
- Supporting appendices and standards

The SWDD combines architectural diagrams, interface views, workflow standards, and UI design patterns to provide a complete description of the Career Bound software system.

1.4 Reference Material

The following references were used in the design of Career Bound:

- Software Requirements Specification (SRS)
- IEEE 1016 Software Design Description guidance
- Course textbook Chapter 4.1 – Design Description
- GitHub CareerBound-SDD Repository Standards and Workflow Documentation

- Career Bound Component Diagram Standards
- Career Bound UI and Wireframe Standards

1.5 Definitions and Acronyms

Term / Acronym	Definition
API	Application Programming Interface
UI	User Interface
UX	User Experience
QA	Quality Assurance
IC	Individual Contributor
SWDD	Software Design Document
SRS	Software Requirements Specification
REST	Representational State Transfer
Wireframe	Simplified UI layout representation
Component Diagram	Diagram representing major system components and interfaces
Responsive Design	UI design adapting to multiple screen sizes

2.0 SYSTEM OVERVIEW

Career Bound is designed as a modular career networking platform that supports interaction between students and employers. The system provides profile management, resume handling, job posting functionality, notifications, and advanced search features.

The system is divided into multiple major services and interface layers in order to improve maintainability, scalability, and separation of responsibilities.

The primary system users include:

- Students
- Employers / Companies
- Administrators

The system supports both desktop and mobile user interfaces through responsive UI design patterns.

Major functional areas include:

- Authentication and user management
- Profile management
- Resume services
- Job posting services
- Search services
- Communication services
- Data storage services

3.0 SYSTEM ARCHITECTURE

3.1 Architectural Design

The Career Bound system is designed using modular, component-based architecture to clearly separate concerns and thus enable scalability and maintainability. The overall system is decomposed into well-defined, replaceable components that communicate through explicit interfaces and ports.

Figure 1.1 below shows the high-level component diagram for the Career Bound system. This diagram shows how the system responsibilities have been partitioned into major subsystems and how those subsystems collaborate to deliver the complete functionality required by the SRS.

Figure 1.1 – Career Bound System Master Component Diagram (UML 2.0)

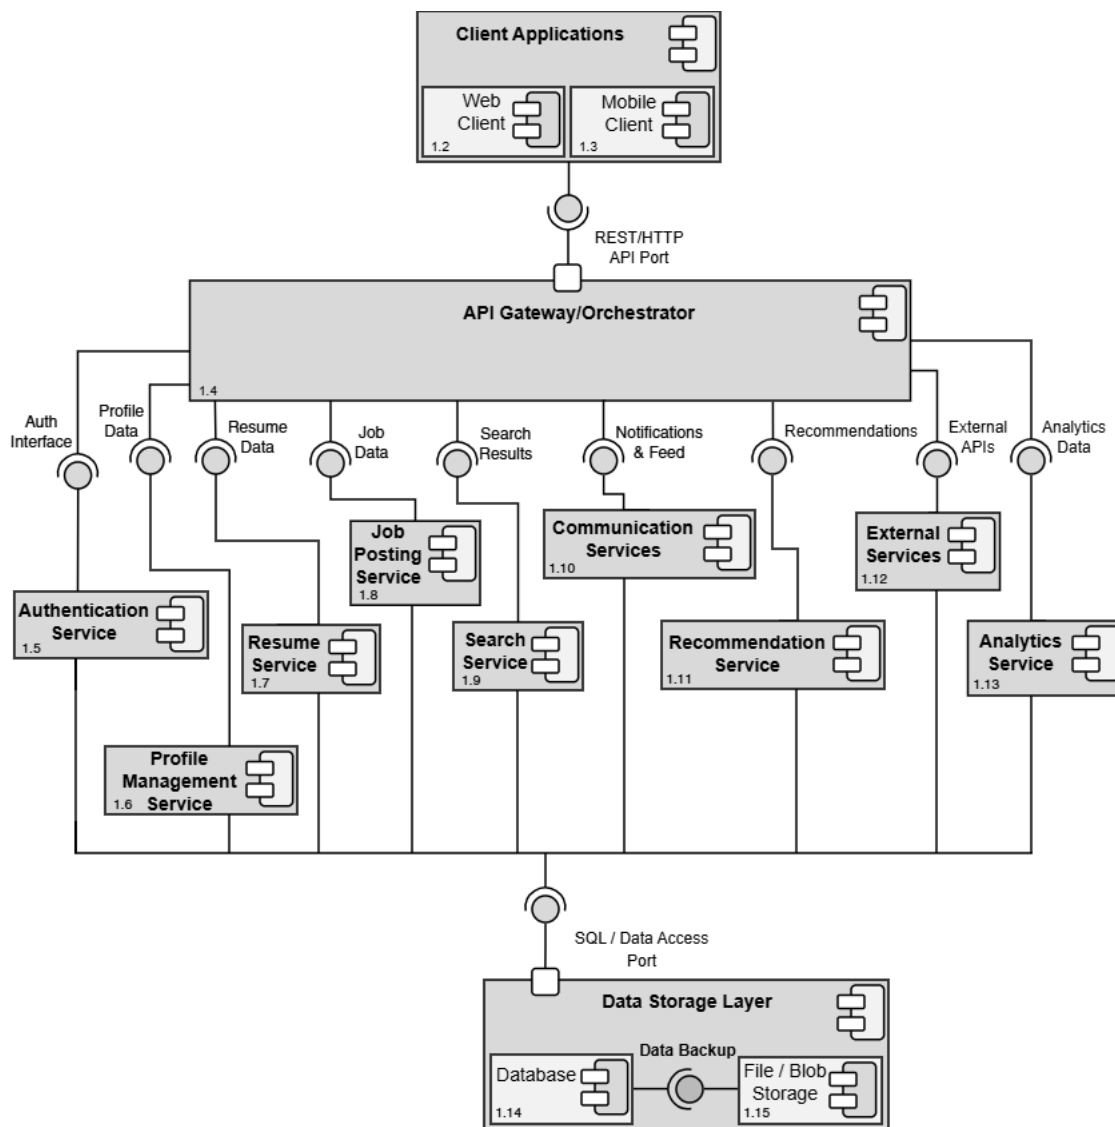

FIGURE 1.1

Design Information

Field	Description / Purpose
View Name & Number	1.1 – Career Bound System Master Component Diagram (UML 2.0)
Purpose	Describe the overall system view.
Description	Basic client, application, database architecture with two types of clients: mobile and web.
Requirements	
Elements	Client Applications: Web Client and Mobile Client
	API Gateway/Orchestrator
	Auth Service
	Profile Management Service
	Resume Service
	Job Posting Service
	Search Service
	Communications Service
	Recommendation Service
	External Services
	Analytics Service
Navigation / References	
Viewpoint	Component Diagram

The interfaces and ports shown in Figure 1.1 are formally defined in the Interface Glossary below. All components communicate exclusively through these explicit interfaces, ensuring low coupling and high replaceability.

Interface Glossary – Career Bound System Master Component Diagram

Interface Name	Description	Provided By	Required By
REST/HTTP API Port	Formal, well-defined entry point for all client (Web + Mobile) communication	API Gateway / Orchestrator	Client Applications (Web Client + Mobile Client)
Auth Interface	Login, registration, role management, and session handling	Authentication Service	API Gateway
Profile Data	Read/write access to company and student profiles (locations, following, skills, GPA, etc.)	Profile Management Service	API Gateway, Search Service, Recommendation Service
Resume Data	Resume creation, submission, storage, retrieval, and access control	Resume Service	API Gateway, Search Service, Company profiles

Job Data	Job posting creation, editing, deletion, required skills, and job details	Job Posting Service	API Gateway, Search Service, Recommendation Service
Search Results	Candidate and job search results, filters, autocomplete, and wildcards	Search Service	API Gateway
Notifications & Feed	In-app notifications, push notifications, news feed posts, and updates	Communication Services	API Gateway
Recommendations	Job and candidate recommendations based on profiles, resumes, and job data	Recommendation Service	API Gateway
External APIs	Integration with third-party services (USPS address validation, autocomplete APIs, push notification providers, etc.)	External Services	API Gateway
Analytics Data	System usage metrics, reporting, and analytics data	Analytics Service	API Gateway
SQL / Data Access Port	Formal port — the single standardized interface through which all services access persistent data (the only way any service talks to the database or file storage)	Data Storage Layer	All services

The architecture is organized into four primary layers:

- **Client Applications (parent)** – Encloses the Web Client and Mobile Client. These components provide the unified user interface for both students and companies, supporting all features described in SRS sections 2.x and 3.x.
- **API Gateway / Orchestrator** – Serves as the single, centralized entry point for all client requests. It routes traffic to the appropriate backend services and enforces cross-cutting concerns such as authentication and request orchestration.
- **Core Services Layer** – Contains the business logic components:
 - Authentication Service
 - Profile Management Service
 - Resume Service
 - Job Posting Service
 - Search Service
 - Communication Services (Notifications + News Feed)
 - Recommendation Service
 - External Services
 - Analytics Service

Each service is responsible for a cohesive set of related functions and exposes well-defined interfaces to the rest of the system.

- **Data Storage Layer (parent)** – Acts as the single source of truth for all persistent data. It encloses the Database and File / Blob Storage components and exposes the formal SQL / Data Access Port used by every service in the system.

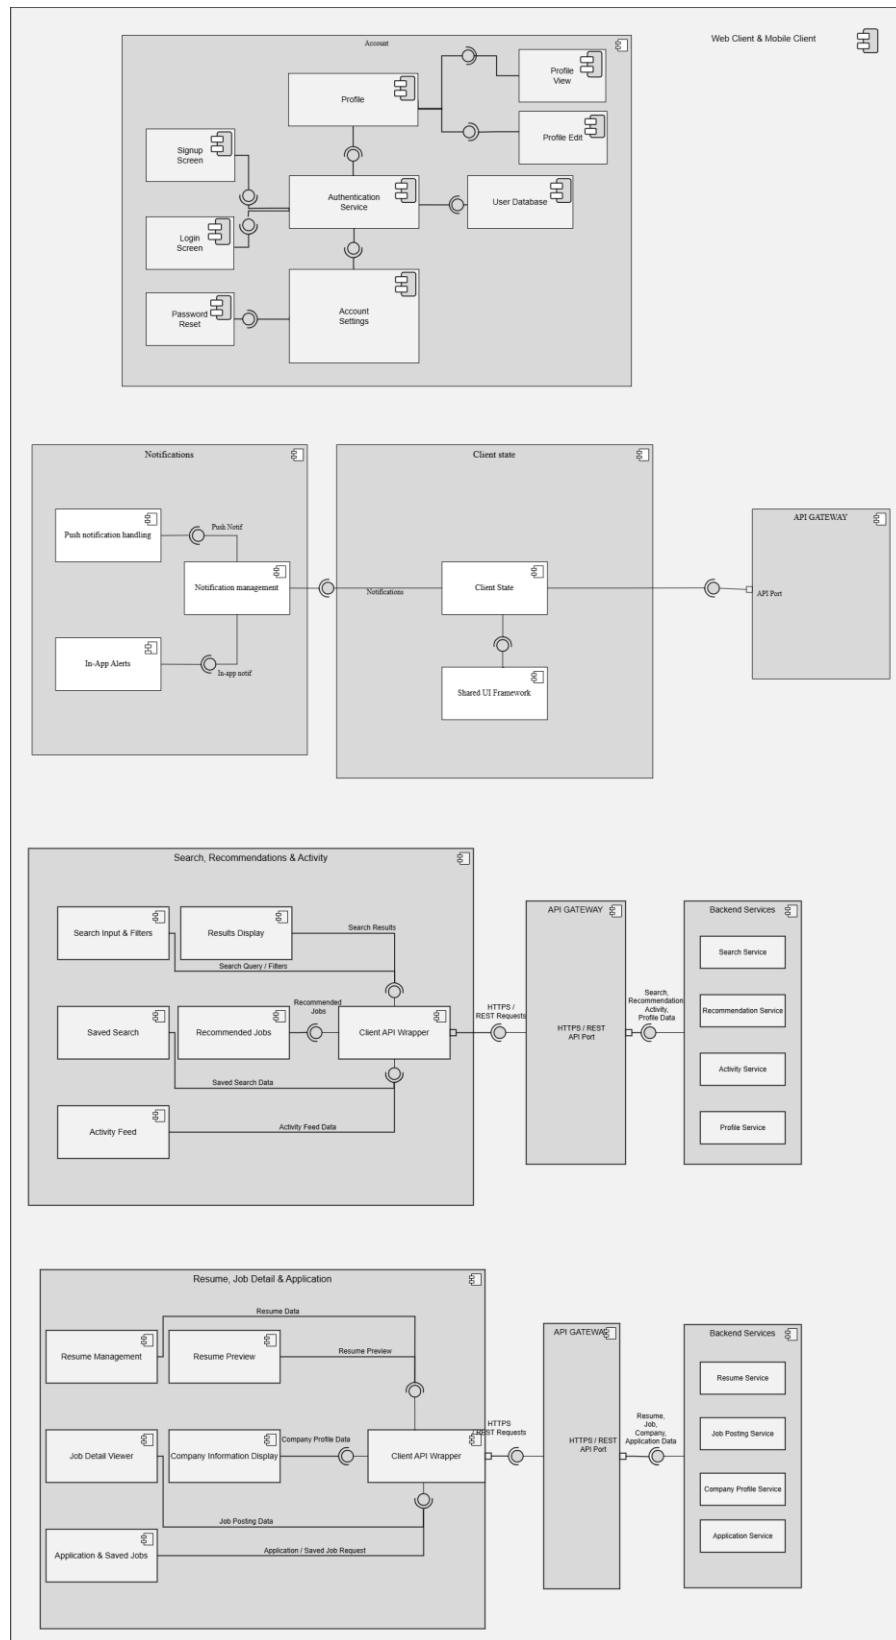

All communication between the Client Applications and the backend services flows through the **REST/HTTP API Port** provided by the API Gateway. Every service communicates with the Data Storage Layer exclusively through the **SQL / Data Access Port**. This design ensures reduced dependencies between components, clear separation of responsibilities, and makes individual components replaceable and maintainable. Detailed views of each major component are provided in Figures 1.2 through 1.15. This modular architecture directly supports the system's requirements for accessibility, scalability, and maintainability while providing a clear roadmap for implementation and future extension.

3.2 Decomposition Description

The master component diagram (Figure 1.1) provides a high-level view of the overall system architecture. This section presents the detailed decomposition of each major component identified in the master diagram. Each sub-diagram shows the internal structure of the component, its sub-components, and the interfaces through which it interacts with the rest of the system. All sub-diagrams maintain the same interface names and ports as defined in the master diagram and the Interface Glossary to ensure consistency.

The following figures provide the detailed decomposition of each major component shown in the master diagram (Figure 1.1):

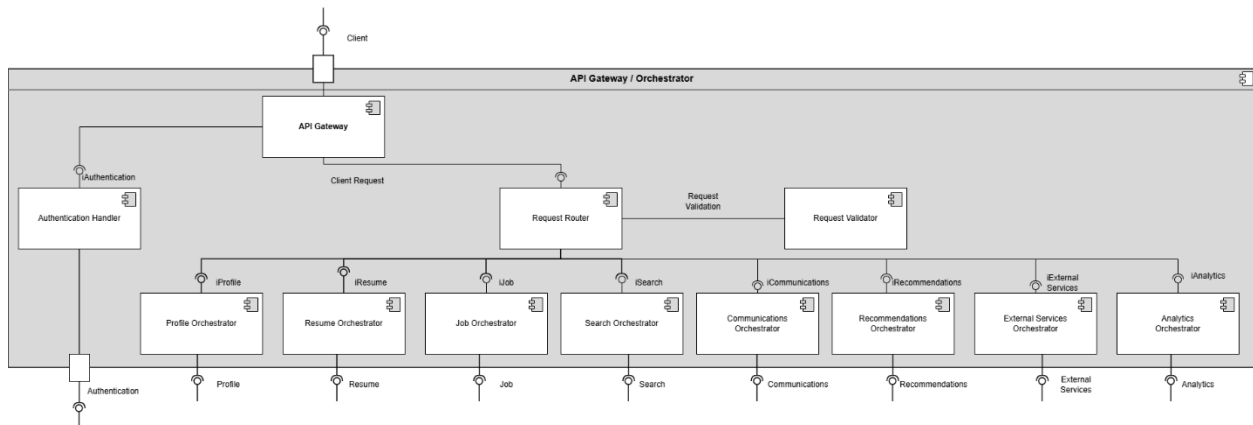

Figure 1.2 & 1.3 – Web & Mobile Client Detail

Design Information

Field	Description / Purpose

Description	Basic service demonstrating file and blob storage.
Requirements	
Elements	Upload / Validation Layer
	Raw Byte Storage
	Backup Module
Navigation / References	
Viewpoint	Component Diagram

These sub-diagrams illustrate how each major component has been further decomposed into smaller, cohesive sub-components while preserving the explicit interfaces and ports defined at the system level. This decomposition supports modular design principles and enables independent development and maintenance of each subsystem.

3.3 Design Rationale

Discuss the rationale for selecting the architecture described in 3.1 including critical issues and trade/offs that were considered. You may discuss other architectures that were considered, provided that you explain why you didn't choose them.

4.0 DATA DESIGN

4.1 Data Description

Explain how the information domain of your system is transformed into data structures. Describe how the major data or system entities are stored, processed and organized. List any databases or data storage items.

4.2 Data Dictionary

Alphabetically list the system entities or major data along with their types and descriptions. If you provided a functional description in Section 3.2, list all the functions and function parameters. If you provided an OO description, list the objects and its attributes, methods and method parameters.

5.0 COMPONENT DESIGN

In this section, we take a closer look at what each component does in a more systematic way. If you gave a functional description in section 3.2, provide a summary of your algorithm for each function listed in 3.2 in procedural description language (PDL) or pseudocode. If you gave an OO description, summarize each object member function for all the objects listed in 3.2 in PDL or pseudocode. Describe any local data when necessary.

6.0 HUMAN INTERFACE DESIGN

6.1 Overview of User Interface

The following diagrams provide an approximation of the central UI elements that will allow the users to utilize the various services provided, including descriptions of their functionality and purposes as well as site navigation details.

Mobile View

Design Information

Field	Description / Purpose
View Name & Number	3.1 – Company Dashboard Screen
Purpose / Design Concern	Company dashboard to help a company manage recruiting activity from desktop and mobile views.
Description	Provides a desktop and mobile view where company users can review job posting activity, applications, candidate search access, notifications, and company-related updates.
Requirements	Software Requirements Specification (SRS) for Career Bound: 2.1 Company Profile Page, 2.2 Notifications, 2.3 Search Features, 2.4 News Feed, 2.5 Job Postings

Field	Description / Purpose
	Reference: https://content.byui.edu/file/968cdd33-09eb-4430-99a4-131d25e138d4/1/Teach/SRS/430.SRS.CareerBound.pdf
Elements	Navigation menu: provides a company with a list of options to select from.
	Search bar: provides a company the ability to search.
	Company Profile area: provides a company with access to all company profile data.
	Notifications area: provides a company with access to company notifications.
	Candidate Search feature: provides a company the ability to search or filter job candidates.
	Job Posting area: provides a company access to job postings.
	Resume section: provides a company access to a list of candidates who have submitted job applications.
	News Feed section: provides a company access to news feed options
	Login / Logout: clicking the company logo provides a company with the ability to login or logout.
Inputs	Search query text, clicks on navigation items, clicks on quick action buttons, and selections related to applications or job postings.
Outputs	Company dashboard metrics, application status information, job posting status information, notifications, and news feed updates.
Navigation / References	1.1 Login / Logout, 3.2 Candidate Search, 3.3 Job Posting Creation, 4.1 Notifications, 4.2 News Feed
Viewpoint	UI Wireframe / Mockup (Desktop & Mobile)

Design Information

Field	Description / Purpose
View Name & Number	3.2 Candidate Search
Purpose / Design Concern	Allows company recruiters a way to find potential job seekers.
Description	A specialized search engine for the user to find candidates based on desired filters. Designed for both desktop users and mobile users.
Requirements	2.3.1, 2.3.2, 2.3.4, 2.3.8
Elements	Search Bar Site Navigation Search Results Grid Filter Categories Filter Checkboxes Search Result Cards

	Advanced Search Toggle
	Candidate Name
	Candidate Profile Picture
	Candidate Year
	Filter Scroll Bar
Inputs	User will click on the search bar and enter a search item; user can choose a filter to toggle; the user can choose a candidate to open a new page.
Outputs	Candidate profile cards display candidate information; candidate profiles can be filtered.
Navigation / References	
Viewpoint	UI Wireframe / Mockup (Desktop & Mobile)

3.3 Job Posting Creation Screen

Desktop View

Mobile View

Design Information

Field	Description / Purpose
View Name & Number	3.3 Job Posting
Purpose / Design Concern	Allows company users to create, edit, and remove job postings, manage required skills, and review resume submissions in a centralized Jobs view.
Description	Displays a company-facing Jobs screen with job posting controls, a job posting data panel, a free-form text area, a required skills toggle, an editable required-skills list, a filters section, and a resume form submissions area in both desktop and mobile wireframe layouts.
Requirements	SRS 2.5 Job Postings (2.5.1--2.5.7)
Elements	Header with logo, search bar, and profile/menu
	Navigation menu with Dashboard, Profile, Jobs, Resume, Notifications, and News Feed
	Add Job Button
	Edit Job Button
	Remove Job Button
	Jobs Panel
	Job Posting data section
	Free-form text area
	Required skills toggle
	Edit Required Skills button
	Optional required skills list
	Filters section
	Resume form submission panel
Inputs	Company user selects Add Job, Edit Job, or Remove Job; enters or edits job posting text; toggles required skills on or off; edits the required skills list; applies filters; reviews submitted resumes.
Outputs	Displayed job posting information, updated required skills settings, filtered submission results, and visible resume form submissions for review.
Navigation / References	Related views include Company Dashboard (3.1), Candidate Search (3.2)
Viewpoint	UI Wireframe / Mockup (Desktop & Mobile)

Design Information

Field	Description / Purpose
View Name & Number	Notifications Screen Desktop View 4.1.1
Purpose / Design Concern	The Notification Screen exist to allow the user to customize what notifications they receive from Career Bound. This is for the End User and satisfies section 3.2 in the SRS.CareerBound.docx
Description	The Notification Screen will allow the user to customize notifications about their News Feed, Company Viewing their profile, Push Notifications, New posts by company they follow, notifications from company they follow, personal messages, and allow the user to mute all notifications. Uses the filter component to create a list of companies to receive notifications from.
Requirements	3.2.1. There shall be a notification push sent to the student user instantly after a notification trigger. 3.2.2. The student user shall receive a notification when a company they are following makes a post or sends out a

	notification to its followers. 3.2.3. The student user shall receive a notification when a company sends them a personal message. 3.2.4. Notifications may be pushed to a student user's phone outside of the system 3.2.5. Student users may receive a notification when a company representative views his/her profile. 3.2.6. All users may choose to mute notifications 3.2.7. There shall be settings allowing the student user to add, alter and remove filters for notifications.
Elements	Search Bar App navigation Toggle Switch Create Filter Button Edit Pen Icon Delete X Icon Notification Card Notification Filter Card Profile/Menu
Inputs	Toggle Switch, Click Button, Click Text, Filter Companies, Search
Outputs	Notifications Settings, Filtered Company List
Navigation / References	Filter Create Screen, Dashboard Screen, Profile Screen, Jobs Screen, Resume Screen, News Feed Screen
Viewpoint	The design representation or notation used for the view. UI Wireframe / Mockup (Desktop)

4.2 News Feed

Desktop View

Mobile View

Design Information

Field	Description/Purpose
View Name & Number	4.2 – News Feed
Purpose / Design Concern	Allows students to filter and view their news feed.
Description	Displays relevant news for students, which can be filtered by different tags to view specific news reports.
Requirements	2.4 News Feed (2.4.1–2.4.6), 3.4 News Feed (3.4.1–3.4.2)
Elements	Logo Notifications Search Bar Menu/Profile Feed Filter Explore Channels Headlines
Inputs	Current news, current location
Outputs	Updated news feed, current location displayed
Navigation / References	Dashboard, Profile, Jobs, Resume, Notifications, News Feed
Viewpoint	UI Wireframe / Mockup (Desktop & Mobile)

6.3 Screen Objects and Actions

A discussion of screen objects and actions associated with those objects.

7.0 REQUIREMENTS MATRIX

The following table provides a cross-reference that traces each major component in the system architecture to the specific SRS requirements it fulfills. Below this SRS Requirements Mapping Table you will find Requirements Traceability Matrices for quick visual SRS Requirements tracing.

SRS Requirements Mapping Table

Component	SRS Sections / Requirements It Directly Supports
Client Applications (Parent)	• 1.2 Application Scope (web and mobile interfaces that share the same features) • Overall client-side architecture, shared UI patterns, role-based views, and coordination between web and mobile clients
Web Client	• Primary web-based user interface (browser UI) • Implements all web UI elements for Company and Student features (sections 2.x and 3.x) • Profile pages, search bar, forms, news feed display, notifications display, resume form, job browsing, etc. (1.2.1)
Mobile Client	• Mobile application user interface • Implements the same features and characteristics as the Web Client (per SRS 1.2.1) • Mobile-optimized UI for all features in sections 2.x and 3.x (profiles, search, news feed, notifications, resume form, job browsing, etc.)
API Gateway / Orchestrator	• Cross-cutting orchestration for all client–service communication (implicit in 1.2 and all functional requirements in 2.x / 3.x)
Authentication Service	• Foundational requirement for all logged-in features (profiles, following, notifications, job postings, resume access, etc.) • Required for every section under 2.x and 3.x
Profile Management Service	• 2.1 Company Profile Page (2.1.1–2.1.3.10) • 3.1 Student User Profile (3.1.1–3.1.3.3)
Resume Service	• 3.5 Resume (3.5.1–3.5.5.2) • Referenced in 2.1.2, 2.2.5, 2.3.3, 2.3.5, 2.5.6, 3.1.3.1–3.1.3.3
Job Posting Service	• 2.5 Job Postings (2.5.1–2.5.7) • Referenced in 3.3.1, 3.4.1, 2.2.5
Search Service	• 2.3 Search Features (2.3.1–2.3.8) • 3.3 Search Features (3.3.1–3.3.2)

Communication Services (Notifications + News Feed)	• 2.2 Notifications (2.2.1–2.2.5) • 2.4 News Feed (2.4.1–2.4.6) • 3.2 Notifications (3.2.1–3.2.7) • 3.4 News Feed (3.4.1–3.4.2)
Recommendation Service	• Job and candidate recommendations based on profiles, resumes, and job postings • Supports 2.3 Search Features, 2.5 Job Postings, 3.3 Search Features, and 3.1/3.5 profile/resume data
External Services	• External integrations (USPS address validation in 2.1.3.9, autocomplete API in 2.3.6, push notification services in 2.2, etc.) • Any third-party APIs referenced throughout the SRS
Analytics Service	• Provides reporting and analytics on job posting performance (views, applications, 2.5), candidate search effectiveness (filters, results, 2.3), profile and resume engagement (2.1, 3.1, 3.5), and notification / news feed activity (2.2, 2.4, 3.2, 3.4) • Monitors key performance metrics (e.g., search results returned within 3 seconds per 2.3.5) • Supports data-driven platform improvements, usage insights, and overall system monitoring
Data Storage Layer (Parent)	• Provides the single unified SQL / Data Access Port used by every service in the system • Acts as the central enclosing component that coordinates Database and File/Blob Storage • Manages system-wide data concerns (transactions, consistency, backups, scalability, reliability) • 4. Hardware requirements (implicit backend storage, servers, infrastructure)
Database	• All persistent data storage for profiles, resumes, job postings, notifications, news feed, authentication, etc. • Referenced in every “Data X.X.X” entry throughout the SRS
File / Blob Storage	• Storage of uploaded resumes, profile images, attachments, and other binary files • Supports 3.5 Resume submission and any file-related requirements

The following Requirements Traceability Matrices map the requirements defined within the Software Requirements Specification (SRS) to the CareerBound system architecture components responsible for supporting, implementing, or interacting with those requirements.

These matrices are intended to:

- verify that all documented requirements are addressed within the system design,
- demonstrate traceability between requirements and architectural components,
- support validation and quality assurance activities, and
- ensure consistency between the SRS and the Software Design Description (SDD).

An “X” within a matrix cell indicates that the corresponding component directly supports, implements, manages, or participates in fulfilling the specified requirement.

The matrices are organized by major SRS requirement sections for improved readability and maintainability.

7.1 Company Profile Requirements Matrix (SRS 2.1)

Component	2.1.1 Profile	2.1.2 Resume	2.1.3.1 Contact	2.1.3.2 Location	2.1.3.3 Skills	2.1.3.4 Following	2.1.3.5 Posting	2.1.3.6 Analytics	2.1.3.7 Messaging	2.1.3.8 Search	2.1.3.9 Validation	2.1.3.10 Security

8.0 APPENDICES

This section is optional.

Appendices may be included, either directly or by reference, to provide supporting details that could aid in the understanding of the Software Design Document.
